### Hybrid HTML / PHP Page - Static for SEO, Dynamic when hit

Unlike a PHP or ASP page which sits in a database until the page is called to display, we create a hybrid page. It is both a HTML static page and dynamic page; it is always up and it acts like a dynamic page after clicking on it.

Every page has a static page that can be submitted to the search engines with meta tags, keywords, word clouds, etc.

### Freight Capabilities

Each vendor can sell different products and use many different shipping methods.

If a manufacturer has multiple locations and each location has a different set of products, or some products are the same among all the branches and some are unique...

- Customer chooses a product sold at 4 different locations—our program will determine which manufacturing faculty has the product at the least amount of freight.
- Customer buys 3 products and all come from different manufacturing locations – the customer will get 3 invoices with freight based on 3 different locations.

### Parcel – Ship Single Orders

- Ship single / multiple order to multiple locations
- Each product from each “Ship To” location can have a specialized shipping method.
- Each major customer or distributor can have unique shipping methods.
